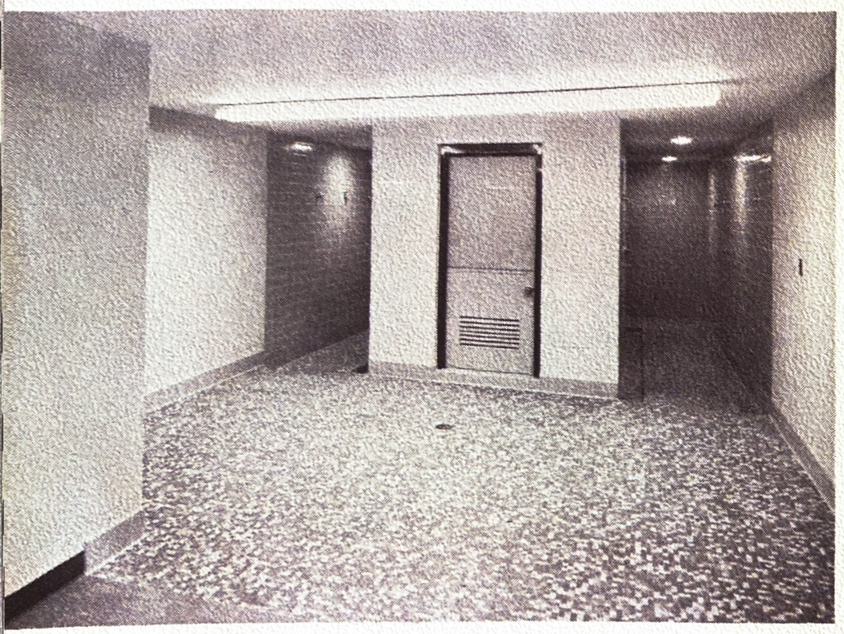
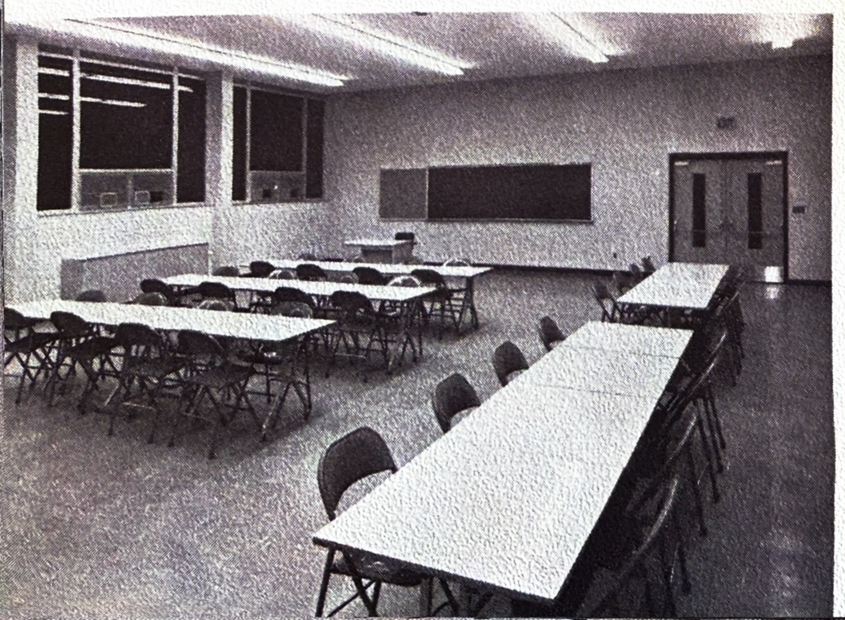
OPEN HOUSE DEDICATION

Physical Education and Classroom Units

LINCOLN HIGH SCHOOL

MANITOWOC, WISCONSIN





NEW FACILITY HIGHLIGHTS

Not since 1924, when original facilities were constructed for an enrollment of 1000, have physical education facilities been expanded. New facilities utilized with the original gym and pool will provide for more than twice the original number of students, an enrollment of 2200.

PHYSICAL EDUCATION ADDITION

The new physical education unit features steel column and truss construction, masonry walls and tinted plexi-glass windows.

Around the perimeter of the gymnasium is a one-tenth mile track. The asphalt activities area has broad jump, high jump, and pole vault sections, and is marked for two tennis and two volley ball courts.

The wood floor area is marked for one main basketball court, two cross courts and six badminton courts.

The balcony area is marked for one basketball court and four badminton courts.

At least four classes may be carried on simultaneously in the new gym along with two more classes in original facilities.

Folding bleacher capacity for athletic and community events is estimated at 3,680; main floor bleachers, 3,000; balcony bleachers, 680.

The east end of the physical education unit is divided into three floors. The first floor houses two shower rooms, two locker rooms, first aid room, instructors' facilities, uniform laundry, drying and storage facilities.

The second floor houses a multi-purpose room which will be used as a study hall, testing center, auxiliary lunch room, and co-curricular activities room. Adjacent to it is a room for storage of instructional equipment and materials.

The third floor houses a large group audio-visual and lecture room and an office. Lavatories, custodial facilities, and areas for water, heating, ventilating, and power equipment complete the space usage allocations in this building.

An underground passageway connects the physical education building to the main building. At the juncture is the

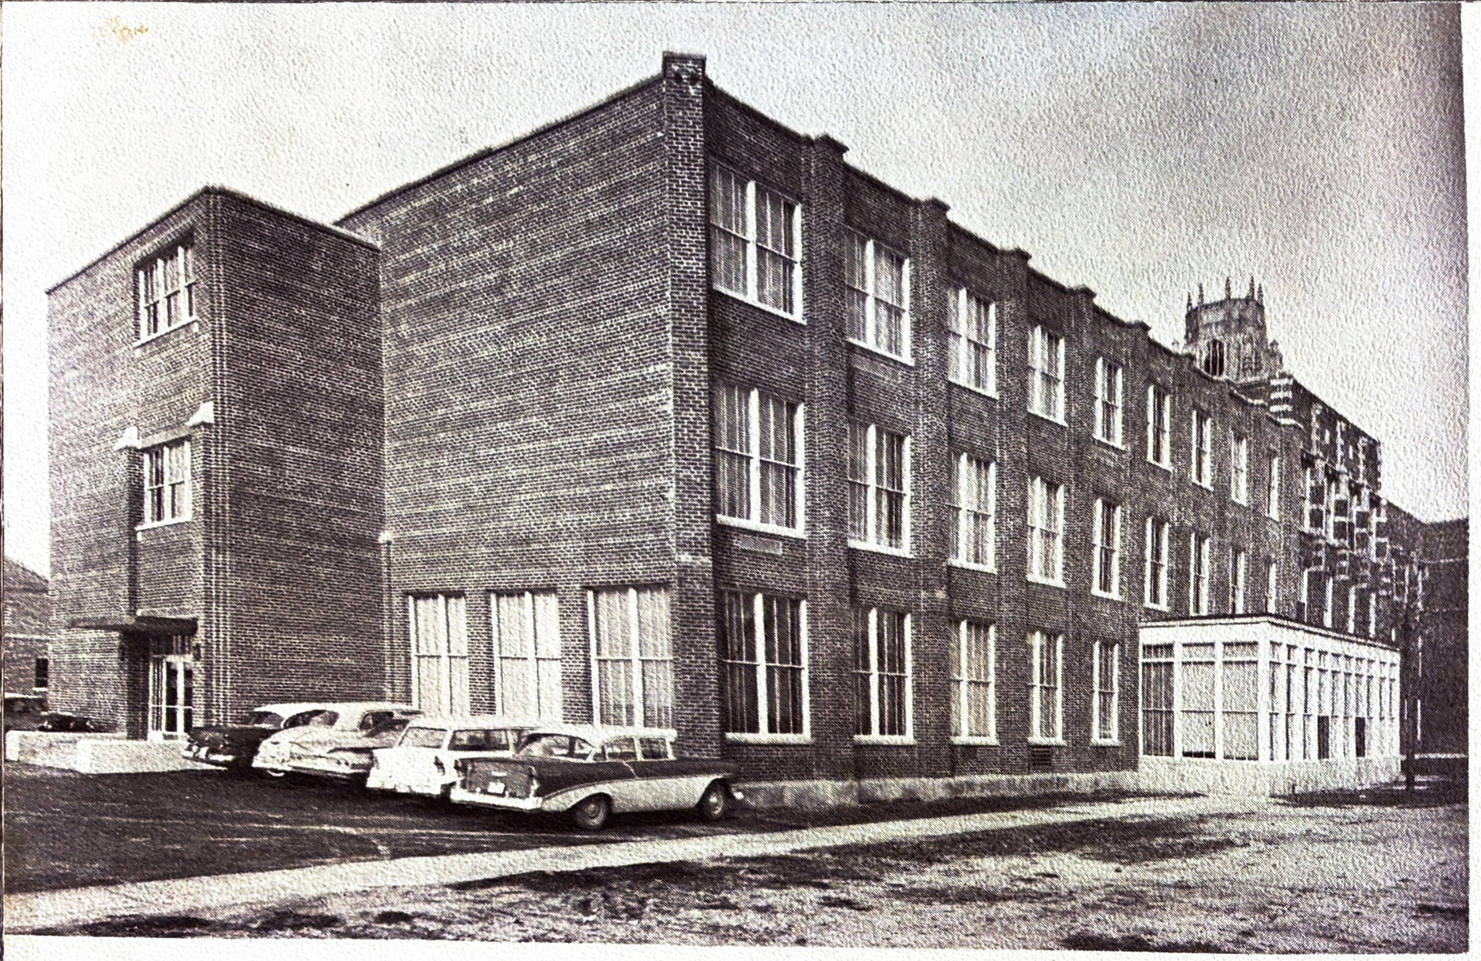
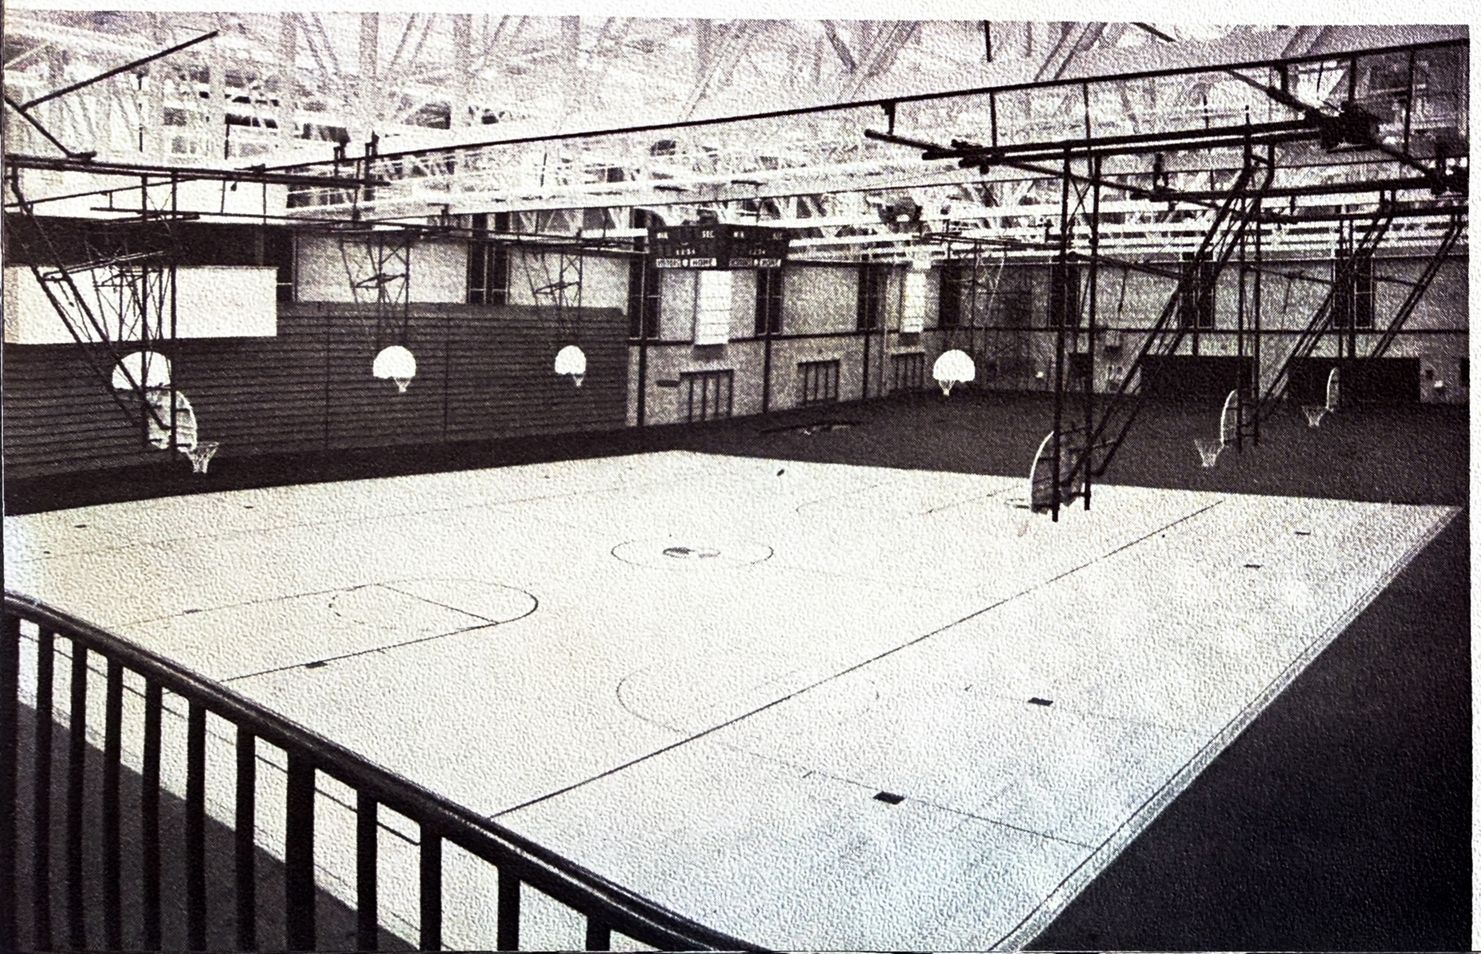
State Superintendent of Public Instruction

Inspection Tours until 9:00 p.m. and 7:00 - 9:00 p.m., Monday, Dec. 18

Swimming and Diving Exhibition in Vits Natatorium





entrance to new shower and locker facilities replacing former facilities which will be torn out and replaced by four academic classrooms. A hall in space formerly occupied by the east bleachers of the original gym leads to the main building.

CLASSROOM ADDITION

An eleven classroom second and third floor addition has been joined to the south end of the school's main corridors above the library and art wing. Features of this unit include on the third floor a combination physics-chemistry laboratory, biology laboratory, classroom for large-group instruction, and two conventional classrooms. The second floor houses six new conventional classrooms including one wired as a language laboratory. Lavatory facilities and instructional materials preparation centers complete the facilities.

Total construction then includes 15 classrooms, audio-visual lecture room, multi-purpose room, and physical education facilities. It should be noted that physical education facilities will also be used for inter-mural and intra-mural school sports and whole school assemblies. (The school auditorium will seat only two-thirds of present enrollment.) Facilities will also be used for various community functions sponsored by civic organizations.

PROJECT COST DATA

CLASSROOM WING

Construction	$258,068.50
Heating and Ventilating	32,680.00
Plumbing	43,915.00
